

ABSTRACT

A system and method for using a hand held device having a display to display a readable representation of an audio track of a playing media such as, for example, a television program, a compact disc, or digital video disc. In one embodiment, the system
5 generally includes a consumer appliance for playing the media wherein the consumer appliance is adapted to transmit a signal including data that is a representation of the audio track. In a further embodiment, the representation of the audio track can be downloaded to the hand-held device from an external source such as, for example, a Web site on the Internet.
